

## Corrections Policy

Quantum may publish corrections to price assessments after the publication date, typically to correct errors that may arise from wrong data entry, erroneous calculation of market data, misreported information or the incorrect application of the methodology.

On rare occasion, Quantum may also retroactively correct assessments in light of new market data, such as confirmed bids, offers or trades, in assessments that were previously concluded by market survey.

Subscribers are welcome to query assessments and provide fresh data that will support a correction to an assessment.

The Quantum policy is intended to enhance the accuracy of assessments and maintain accurate historical records.

A corrected assessment will be peer reviewed before publication.

A notice of the correction shall be posted in the daily newsletter, alongside the new value, the change from the previous assessment, and the date of the corrected assessment.

To challenge an assessed value, in the first instance please send an email to [info@qcintel.com](mailto:info@qcintel.com)
